TRAXESS

DATA SOLUTIONS

PROCESSING DATA FROM ANY SOURCE

OUR PRODUCT

To ensure data quality for process automation,
we develop and operate customised software solutions for

- Consolidating booking data

- Validating user profiles

- Importing of country intelligence from third parties

CERTIFIED GDS WEBSERVICE SOLUTIONS

The global distribution system (GDS) webservice enables customers to access booking data processed by travel agencies from around the world in one system.

aMaDEUS   **Sabre**   Travelport

REST API'S TO BOOKING PLATFORMS

With the JSON API, you can process data on flight, hotel, car, and railway reservation segments in a free order or as an individual booking received from a source system such

AMERICAN EXPRESS GLOBAL BUSINESS TRAVEL   EGENCIA   CWT 150 years in travel   BCD travel   hotel.de

XML WEBSERVICE

Upon request, the XML webservice is provided for processing user profile data, flight bookings, hotel reservations, car rental arrangements

DATA PARSING & ERROR REPORTING

The Data Parser reads, translates and formats incoming data into a uniform format, which is then stored in the database.

The Quality Checker is configured depending on business requirements so that only records that meet the minimum requirements for process automation are launched into the client system.

Records blocked from being process due to quality issues are reported immediately to the data source and its manager.
